Formatting Numbers as Strings

Syntax: "format_spec" % numeric_exp format_spec syntax: % width.precision type

- width (optional): align in number of colums specified; negative to left-align, precede with 0 to zero-fill
- precision (optional): show specified digits of precision for floats; 6 is default
- type (required): d (decimal int), f (float), s (string), e (float exponential notation)
- Examples for x = 123, y = 456.789

"%6d" % x -> . . . 123

"%06d" % x -> 000123

"%8.2f % y -> . . 456.79

"8.2e" % y -> 4.57e+02

"-8s" % "Hello" -> Hello . . .
